

	GENERAL MAINTENANCE MANUAL ORGANIZATION, DUTIES AND RESPONSIBILITIES	Section: 2 Page: 74 Issue: 7 Revision: 00 Date: 30 Apr 2026
---	---	---

b. Specific Technical Training

1. B737CL Aircraft Type Rating Course
2. B737NG Aircraft Type Rating Course
3. B767 Aircraft Type Rating Course
4. Aircraft Rating Differential Course
5. Engine Ground Run
6. Aircraft Parts Receiving Inspection
7. Suspect Unapproved Part (SUP)
8. Basic Aircraft Inspection Techniques
9. Dangerous Goods for Oversight
10. Differential Cargo Aircraft & Door System (IAI and AEI)
11. B737-800BCF Boeing Conversion Freighter configuration
12. Electrical Wiring Interconnection System (EWIS) (Group 1 and 2, and 5)
13. Fuel Tank Safety (FTS) and Critical Design Configuration Control Limits (CDCCL) (Phase 1 and 2)
14. De-icing and Anti-icing Training
15. Emergency Response Plan (ERP) (Refer to ERPM)
16. Reserved
17. Reserved
18. Auditor Training
19. Reliability Program Management
20. FDR and CVR Basic Knowledge and Interpretation
21. Emergency and Safety Equipment Training and Checking (ESETC)

2.11.9.3 Recurrent Training

Recurrent training commonly includes training known as refresher training, to ensure that ED staff remain capable of properly performing the assigned job. The Needs Assessment procedures will determine the recurrent training requirements for each job assignment. The Need Assessment will also determine the type and frequency of recurrent training for each of its employees.

Two different types of recurrent training are:

- That conducted on a regular basis (refresher training).
- That which updates the Initial Training requirements on a one-time basis.

A. Recurrent Training Courses – Regular Basis

The following re-current courses are applicable to both Certifying Staff and Non-Certifying Staff responsible for the maintenance of aircraft and aircraft component by period of time retraining as follows:

Training Course	Interval
Aircraft Type Rating (Brush Up)	2 Years
Electrical Wiring Interconnection System (EWIS) (Group 1 and 2, and 5)	2 Years
Fuel Tank Safety and CDCCL*	2 Years
Human Factors for Engineering	2 Years
Dangerous goods handling (DG for Oversight)	2 Years
Dangerous goods handling (DG for Engineering)	2 Years
Safety and Compliance Monitoring Management System (SCMS) for Maintenance, LAE, Mechchanic, and AMO staff	1 Year
In-flight Security Training (Security Personnel)	1 Year
Security Awareness Training (Non-Security Personnel)	2 Years
De-icing & Anti-icing Training	2 Years
Emergency Response Plan (ERP)	Refer to ERPM
Aircraft Operation Specification	2 Years
Emergency and Safety Equipment Training and Checking (ESETC)	1 Year

Note: *FTS and CDCCL recurrent training are only required for the personnel who are required to plan, perform, supervise, inspect and certify the maintenance of aircraft and fuel system components.

	GENERAL MAINTENANCE MANUAL ORGANIZATION, DUTIES AND RESPONSIBILITIES	Section: 2 Page: 76 Issue: 7 Revision: 00 Date: 30 Apr 2026
---	---	--

B. Recurrent Training Course – Non-Regular Basis

The recurrent training may be conducted using classroom training, self learning, or other method as appropriate. The training courses require recurrent on a one-time basis are:

- a. Regulations associated with the certificate, operations specifications and related requirements.
- b. Company policies, procedures and practices in case of significant change or new significant procedure is arising.
- c. GMM including quality control processes, particularly those associated with ensuring compliance with maintenance (including inspection), preventive maintenance, and established alteration procedure when the significant change or new significant procedure is arising
- d. New items introduced, or any updating technical information and/or procedure
- e. For Aircraft license engineer who absent from work or has not signed airworthiness release for the aircraft type which approved by CAAT within 6 months, LAE must be re-trained brush up license type course and reissue Authorized Delegation and Airworthiness Release Form.

2.11.9.4 Remedial Training

- A. Engineering Training Dept. has procedures to determine an individual's training requirements, including when an employee will be provided with remedial training. Engineering Training Dept. has remedial training procedures to rectify an employee's demonstrated lack of knowledge or skill by providing information as soon as possible. In some instances, remedial training may consist of an appropriately knowledgeable person reviewing procedures with an employee through on-the-job training (OJT).
- B. Successful remedial training shows an individual what happened, why it happened, and positively, how to prevent it from happening again.
- C. Upon requesting a special Training (Ad-hoc) by time to time for technical improvements so as to gain more reliable aircraft continues airworthiness matter

2.11.9.5 On Job Training (OJT)

- A. OJT may be provided by qualified employees or qualified contract personnel.
- B. OJT training will be recorded on the Employee OJT Training Record.
- C. On-the-job training shall be conducted at and under the control of K-Mile for the particular aircraft type and shall be assessed by designated appropriately qualified assessors. It shall be started and completed within the three years preceding the application for a type rating endorsement.
- D. The OJT should cover at least 50% of the tasks be selected among those applicable to the specified components. Other tasks than those tasks may be considered as a replacement when they are relevant. Typically, in addition to the variety and the complexity, the OJT tasks should be selected because of their frequency, safety, novelty, etc.
- E. Thereafter, periodic work checks are done on employees to keep them current and upgrade their proficiency. Any deficiency found in an area will result in retraining in those aspects of the work.
- F. The ETM monitors training, issues examinations to determine Pass/Fail results, and keeps detailed records of individual's training, progress, ensuring that maintenance personnel are familiar with Maintenance and Repair Instructions and procedures.

2.21	Emergency and Safety Equipment Training and Checking (ESETC)									x	x									

Note:

1. x – Mandatory and o – Optional (prefer), Blank – Not Required
2. Training Program is also designed to provide an appropriate training for maintenance that being complied with a current of the entire K-Mile Air Operation Specifications such as RVSM, PBN (RNP/RNAV), and AWO, the requirements for the special equipment (and standard equipment) associated with special operations. In this training, Engineering Training section will outline and walk through how the requirements are established and the rules that govern special operations equipment inspection and maintenance requirements. This specific training will be provided the by either in-house or ex-house instructor, moreover, the outline course would be covered through the requirements contained in CAAT advisory document.
3. Further, form the training matrix, recurrent training that which updates the initial training requirements on a one-time basis may be required when new items introduced or Any update technical information and/or procedure.
4. Aircraft General familization course can be substituted by aircraft type course.
5. x¹ – Only initial training is required.
6. x² – Only staff who is responsible for reliability program is required this training.
7. x³ – Only staff who is responsible for FDR and CVR readout report evaluation is required this training.
